

Who am I?

This January I became two cubs. At their birth they were very small and blind, dumb and nearly naked. But in April they are so big that they could leave the cave. Now, they have to learn what they can eat and what is dangerous in this world. During May it's mating time. From June on we will find a lot to eat. I eat berries, grass, roots and insects. In October I'm looking for a cave and I make it comfortable with grass, leaves, branches and moss.

In November I only eat some nuts and then I will go to my cave...In December I eat nothing, my temperature sinks about 3- 5°C and my heartbeat slows down from 80 to 40 beats per minute. During this time I only live from my fatpad.

What's my name? _____

Connect what belongs together:

In the trace of the **wolf** you can always see the claws. Like the trace of the lynx you can see four toes.

The trace of the **bear** has five toes. The long and strong claws you can see very good. The first paw seems to be short and wide. The mark of the second paw is more long than wide. Often you see the whole sole in the mark of the second paw.

Red deer

The **lynx** can draw in his claws. So they stay sharp as knives. In the trace of the lynx you mostly see no claws. You can see four toes.

Who's this?

What kind of tree is this?

Where can you find it?

Who's saying this?

"In the forest zone I feel most comfortable" **says the** _____

"I spend my summertime in alpine and subalpine zones" **says**
the _____

"I hunt my prey in the alpine zone" **says the** _____

*If you want to know the answers: come to the Borjomi- Kharagauli National Park,
and you will find out.*
